Subject: RE: monitoring well access

Sarah,
EPA is conducting a source determination investigation of the vinyl chloride impacting drinking water at the Vermont/Cossell homes. By collecting additional groundwater data, they are going to perform additional analyses that have not been collected historically. These analyses could provide a correlation to volatile organic fatty acids.
EPA is trying to obtain access and setup the sampling event to collect groundwater and indoor air samples for Wednesday, July 7. If EPA does not have monitoring well access, the sampling event will have to be pushed back. Considering there is at least one completed pathway which we have now known about for almost a year, EPA and IDEM would like full cooperation from Michigan Plaza as well as Genuine Parts to conduct this investigation as soon as possible. Per the Voluntary Remediation Agreement, paragraphs 41 and 42, you must provide IDEM and IDEM's representatives access to the site. EPA has discussed with IDEM the potential need for enforcement action if the repeated requests for property access and additional investigations are denied. If EPA decides enforcement action is necessary, IDEM will not allow the site(s) to continue voluntary involvement in the VRP. If either site would like to have representatives take split-samples, EPA has already stated that this is acceptable to them.
Brian Schlieger is in the Gulf for a couple weeks but Shelly Lam is available to discuss any additional concerns about the groundwater sampling event. You can of course call or email me as well.
Thank you,

Erin,

I'm curious as to why the historical data provided for that location is not acceptable to the EPA...? Could you explain, please? I'm looking for a little more explanation on why these specific wells are being sampled.

Sarah

Sarah,
I think Brian meant MMW-P-01 instead of MWP-P-01, which is Mundell's well. Should we contact GeNnx for property access?
Thanks,

Subject: RE: monitoring well access

Erin,

MW-170S, MW-170D and MWP-P-01 are not Mundell monitoring wells. Regarding drum usage: as far as I know we do not have a purge water drum on site. We had them removed after last quarter's sampling event. There will be additional drums onsite after our quarterly sampling event which is scheduled for July 20th.

Please call or email with questions.

Sarah

Subject: monitoring well access

Hi Sarah and Andy,
The EPA representatives would like to get monitoring well access to Genuine Parts and Michigan Plaza wells as soon as possible—would you be able to let me know today if you are able to allow access and send the completed access agreement to us? Also, does either site have drums on-site for purge water storage? If possible, EPA would like to put their purge water into your drums. Please let me know if this is possible.
Thanks so much,

Erin Brittain
